

Product Information

Hypocrellin B liposomes

Cat. No.: X26-05-ZQ1723

Size: 100 mg; 250 mg; 500 mg; 1 g; 5 g

Synonym: Hypocrellin B LPs; Hypocrellin B-loaded liposomes; Hypocrellin B liposomal nanoparticles

This product is for research use only and is not intended for diagnostic use.

Product Information

Description	This formulation represents hypocrellin B liposomes designed to stabilize and solubilize a hydrophobic perylenequinonoid photosensitizer compound. The structural framework consists of a phosphatidylcholine lipid bilayer that accommodates the active molecule, hypocrellin B, directly within its interior lipophilic hydrocarbon tail matrix. The composition is highly optimized with high-purity natural phospholipids and cholesterol to maintain a low membrane permeability profile and prevent the rapid crystallographic precipitation or chemical photo-oxidation of the perylenequinone core in open laboratory media. The resulting vesicles exhibit high colloidal stability, a highly uniform spherical morphology, and a narrow size distribution profile.
Source	Custom synthesis
Functional Group	Hypocrellin B
Form	Solid or powder
Purity	≥95%
Impurities	No visible impurities to the naked eye.
Identity	HPLC/MS/NMR
Stability	This product is stable for one year when stored at the recommended temperature in lyophilized powder.
Quality Level	Research grade
Storage	Store at -20°C.
